Research Experience

Equivariant Pre-trained models through Canonicalization **Mila and McGill University**
Supervisor(s): Prof. Siamak Ravanbakhsh *Jan 2023 - Ongoing*
Implemented equivariant canonicalization functions to orient inputs before passing them through pre-trained models, effectively eliminating the requirement for designing and training extensive equivariant architectures from scratch.

Visual Grounding in Textual Entailment **IIT Kharagpur**
Bachelor's Dissertation | Supervisor(s): Prof. Abir Das, Dr. Rameswar Panda *Jan 2022 - May 2022*
Investigated the effect of simultaneously and individually visual grounding the premise and hypothesis in NLI task. Trained various BERT configurations by leveraging high-level feature representations of image from ResNet-50 and CLIP.

Contextual Bias in Visual Recognition Models **IIT Kharagpur**
Supervisor(s): Prof. Abir Das, Dr. Rameswar Panda (MIT-IBM Watson AI Lab) *Apr 2021 - Dec 2021*
Evaluated mAP and used GradCAM with state-of-the-art computer vision models to quantitatively and qualitatively determine the contextual bias in images containing exclusive and co-occurring biased pairs. Proposed different biased models to inherently capture contextual bias and knowledge distillation approaches for automated bias mitigation.

Explanation Based Learning in Pretrained Language Models **INK-Lab, USC**
IUSSTF-Viterbi Intern | Supervisor: Prof. Xiang Ren *Jun 2021 - Sep 2021*
Worked on different attention-based regularization and knowledge-distillation techniques to analyze the effect of explanations generated using gradient-based saliency methods in the performance of Pre-trained Language Models.

Improving Digital Marketing with Topological Data Analysis **Adobe Research, India**
Research Intern | Supervisor: Iftikhar Ahamath Burhanuddin *May 2021 - Jul 2021*
Implemented Topological Regularization in LSTM Encoder-Decoder architecture to leverage the topological information from customer navigation patterns and obtain sessions' better latent representation to provide insights on sessions.

Emotion Recognition using EEG Signals **Bennett University, India**
Research Intern | Supervisor(s): Prof. Arpit Bhardwaj, & Divya Acharya *Jul 2020–Aug 2020*
Carried literature reviews of recent papers to understand the basics of Genetic Programming and Multi-Task Cascaded Networks. Designed CNN-based and LSTM-based architectures to obtain **87.72%** and **88.6%** mean accuracy, respectively, for classification of EEG signals into valence, arousal, liking, and dominance.

Key Projects

CausalBench: Inferring gene regulatory network with factor graphs **McGill University and Mila**
Causal Inference and ML Course Project | Instructor: Dhanya Sridhar

Studied the computational advantages and scalability potential of factor graphs in causal discovery (DCD-FG) for inferring Gene Regulatory Networks along with key factors such as sparsity regularization and the number of factors.

Crystal Symmetry aware framework for Material Generation **McGill University and Mila**
GGM Course Project | Instructor: Joey Bose and Prakash Panangaden

Implemented equivariant message-passing and knowledge distillation in complex graph encoders (such as DimeNet) to incorporate crystal symmetry (Bravais lattice) information in CDVAE framework for material generation.

Study of Facebook posts during Elections **MIT, USA**
Data Analytics Intern | Supervisor(s): Dr. Kiran Garimella (IDSS, MIT)
Prof. Aaditya Dar (ISB), & Vasundhara Sirnate (The Polis Project)

Designed a complete framework to simplify the study of Facebook posts during elections. Analyzed page characteristics and post reactions from various politics-related Facebook pages and their correlation with election results. Trained simple classification pipelines for assigning the most influenced political party to a post. (Code)
