Research Experience

Document Understanding with LLMs <i>Visiting Researcher Multimodal Foundation Models team</i> Developed permissively-licensed dataset and improved document understanding capabilities of pretrained LLMs [9].	ServiceNow Research Mar 2024 - Jul 2024
Diffusion Models for Materials Generation <i>Supervisor(s): Prof. Siamak Ravanbakhsh, Santiago Miret (Intel Labs)</i> Building conditional diffusion models for materials generation and crystal structure prediction task. Proposed meaningful representations for space groups and atom site symmetries for conditioning and interpretability [8].	Mila and McGill University Sep 2023 - Aug 2024
Equivariant Adaptation of Large Pretrained and Foundation Models <i>Supervisor(s): Prof. Siamak Ravanbakhsh</i> Designed equivariant canonicalization networks to orient inputs to a canonical form, with a regularization loss, before passing through large pretrained/foundation models, effectively eliminating the requirement for designing and training extensive equivariant architectures from scratch [5, 7]. The research paper [5] was accepted to NeurIPS 2023 .	Mila and McGill University Feb 2023 - Sep 2023
Contextual Bias in Visual Recognition Models <i>Supervisor(s): Prof. Abir Das, Dr. Rameswar Panda (MIT-IBM Watson AI Lab)</i> Evaluated mAP and used GradCAM with state-of-the-art computer vision models to quantitatively and qualitatively determine the contextual bias in images containing exclusive and co-occurring biased pairs. Proposed shallow models to capture contextual bias and knowledge distillation approaches for automated bias mitigation to improve.	IIT Kharagpur Apr 2021 - Dec 2021
Improving Digital Marketing with Topological Data Analysis <i>Research Intern Supervisor(s): Iftikhar Ahamath Burhanuddin</i> Implemented Topological Regularization in LSTM Encoder-Decoder architecture to leverage topological information from customer navigation patterns and provide insights on customer sessions. This research resulted in a US patent [4].	Adobe Research, India May 2021 - Jul 2021

Key Projects

CausalBench: Inferring gene regulatory network with factor graphs <i>Causal Inference and ML Course Project Instructor: Prof. Dhanya Sridhar</i> Studied the computational advantages and scalability potential of factor graphs in causal discovery (DCD-FG) for inferring Gene Regulatory Networks (GRNs). As per the CausalBench Challenge metrics, observed ~2x increase with factor-graphs and further improvements with higher number of factors and matrix threshold values. (Code)	Mila
Crystal Symmetry aware framework for material generation <i>GGM Course Project Instructor: Joey Bose and Prof. Prakash Panangaden</i> Incorporated Bravais lattice information and implemented equivariant message-passing in DimeNet graph encoder to integrate crystal symmetry information for material generation . Reduced the Wasserstein distance between generated and ground truth distribution for property and density by more than 10% from CDVAE in the MP-20 dataset. (Code)	McGill University and Mila
Study of Facebook posts during elections <i>Data Analytics Intern Supervisor(s): Dr. Kiran Garimella (IDSS, MIT) Prof. Aaditya Dar (ISB), & Vasundhara Sirnate (The Polis Project)</i> Designed a complete framework to simplify the study of Facebook posts during elections. Analyzed page characteristics and post reactions from various politics-related Facebook pages and their correlation with election results. Trained simple classification pipelines with features from TF-IDF to predict the political party associated with a post. (Code)	MIT, USA
