Research Experience

Diffusion Models for Materials Generation Supervisor(s): Prof. Siamak Ravanbakhsh, Santiago Miret (Intel Labs) Building conditional diffusion models for <i>ab-initio</i> materials generation and crystal structure prediction task. Proposed meaningful representations for space groups and atom site symmetries for conditioning and interpretability .	Mila and McGill University Sep 2023 - Ongoing
Diffusion Models in Offline Reinforcement Learning Supervisor(s): Prof. Stefan Bauer Training diffusion models to generate and augment novel trajectories for underexplored behaviours in offline RL datasets. The aim is to address the problem of distributional shift and learn better generalizing policies with a diverse dataset.	Mila Aug 2023 - Ongoing
Equivariant Adaptation of Large Pretrained and Foundation Models Supervisor(s): Prof. Siamak Ravanbakhsh Designed equivariant canonicalization networks to orient inputs to a canonical form, with a regularization loss, before passing through large pretrained/foundation models, effectively eliminating the requirement for designing and training extensive equivariant architectures from scratch. The research paper [5] on this work was accepted to NeurIPS 2023 .	Mila and McGill University Feb 2023 - Sep 2023
Visual Grounding in Textual Entailment Bachelor's Dissertation Supervisor(s): Prof. Abir Das, Dr. Rameswar Panda Investigated the effect of individual and combined visual grounding of the premise and hypothesis in NLI task . Trained various BERT configurations by leveraging high-level feature representations of images from ResNet-50 and CLIP .	IIT Kharagpur Jan 2022 - May 2022
Contextual Bias in Visual Recognition Models Supervisor(s): Prof. Abir Das, Dr. Rameswar Panda (MIT-IBM Watson AI Lab) Evaluated mAP and used GradCAM with state-of-the-art computer vision models to quantitatively and qualitatively determine the contextual bias in images containing exclusive and co-occurring biased pairs. Proposed shallow models to capture contextual bias and knowledge distillation approaches for automated bias mitigation to improve.	IIT Kharagpur Apr 2021 - Dec 2021
Improving Digital Marketing with Topological Data Analysis Research Intern Supervisor(s): Iftikhar Ahamath Burhanuddin Implemented Topological Regularization in LSTM Encoder-Decoder architecture to leverage topological information from customer navigation patterns and obtain sessions' better latent representation to provide insights on sessions.	Adobe Research, India May 2021 - Jul 2021

Key Projects

CausalBench: Inferring gene regulatory network with factor graphs <i>Causal Inference and ML Course Project Instructor: Prof. Dhanya Sridhar</i> Studied the computational advantages and scalability potential of factor graphs in causal discovery (DCD-FG) for inferring Gene Regulatory Networks (GRNs). As per the CausalBench Challenge metrics, observed ~2x increase with factor-graphs and further improvements with higher number of factors and matrix threshold values. (Code)	Mila
Crystal Symmetry aware framework for material generation <i>GGM Course Project Instructor: Joey Bose and Prof. Prakash Panangaden</i> Incorporated Bravais lattice information and implemented equivariant message-passing in DimeNet graph encoder to integrate crystal symmetry information for material generation . Reduced the Wasserstein distance between generated and ground truth distribution for property and density by more than 10% from CDVAE in the MP-20 dataset. (Code)	McGill University and Mila
Study of Facebook posts during elections <i>Data Analytics Intern Supervisor(s): Dr. Kiran Garimella (IDSS, MIT) Prof. Aaditya Dar (ISB), & Vasundhara Sirnate (The Polis Project)</i> Designed a complete framework to simplify the study of Facebook posts during elections. Analyzed page characteristics and post reactions from various politics-related Facebook pages and their correlation with election results. Trained simple classification pipelines with features from TF-IDF to predict the political party associated with a post. (Code)	MIT, USA
