Highlighted Research Experience

Document Understanding with LLMs

Visiting Researcher | Multimodal Foundation Models team

Developed permissively-licensed open dataset and improved document understanding capabilities of pretrained LLMs [9].

Diffusion Models for Materials Generation

Supervisor(s): Prof. Siamak Ravanbakhsh, Santiago Miret (Intel Labs)

ServiceNow Research

Mar 2024 - Jul 2024

Mila and McGill University

Sep 2023 - Aug 2024

Building **conditional diffusion models** for **materials generation** and **crystal structure prediction** task. Proposed meaningful representations for space groups and atom site symmetries for conditioning and **interpretability** [8].

Equivariant Adaptation of Large Pretrained and Foundation Models Mila and McGill University

Supervisor(s): Prof. Siamak Ravanbakhsh

Feb 2023 - Sep 2023

Designed **equivariant canonicalization networks** to orient inputs to a canonical form, with a regularization loss, before passing through large pretrained/foundation models, effectively eliminating the requirement for designing and training extensive equivariant architectures from scratch [5, 7]. The research paper [5] was accepted to **NeurIPS 2023**.

Contextual Bias in Visual Recognition Models IIT Kharagpur

Supervisor(s): Prof. Abir Das, Dr. Rameswar Panda (MIT-IBM Watson AI Lab) Apr 2021 - Dec 2021

Evaluated **mAP** and used **GradCAM** with state-of-the-art computer vision models to quantitatively and qualitatively determine the contextual bias in images containing exclusive and co-occurring biased pairs. Proposed shallow models to capture contextual bias and **knowledge distillation** approaches for automated bias mitigation to improve.

Key Projects

CausalBench: Inferring gene regulatory network with factor graphs Mila

Causal Inference and ML Course Project / Instructor: Prof. Dhanya Sridhar

Studied the computational advantages and scalability potential of **factor graphs** in **causal discovery** (DCD-FG) for inferring **Gene Regulatory Networks** (GRNs). As per the **CausalBench Challenge** metrics, observed $\sim 2x$ increase with factor-graphs and further improvements with higher number of factors and matrix threshold values. ([Code](#))

Crystal Symmetry aware framework for material generation McGill University and Mila

GGM Course Project / Instructor: Joey Bose and Prof. Prakash Panangaden

Incorporated Bravais lattice information and implemented **equivariant message-passing** in **DimeNet** graph encoder to integrate crystal symmetry information for **material generation**. Reduced the Wasserstein distance between generated and ground truth distribution for property and density by **more than 10%** from **CDVAE** in the MP-20 dataset. ([Code](#))

Study of Facebook posts during elections MIT, USA

Data Analytics Intern / Supervisor(s): Dr. Kiran Garimella (IDSS, MIT)

Prof. Aaditya Dar (ISB), & Vasundhara Sirnate (The Polis Project)

Designed a complete framework to simplify the study of Facebook posts during elections. Analyzed page characteristics and post reactions from various politics-related Facebook pages and their correlation with election results. Trained simple classification pipelines with features from **TF-IDF** to predict the political party associated with a post. ([Code](#))
